Hard-coded credentials are security-sensitive
Security Hotspot
Cognitive Complexity of functions should not be too high
Code Smell
String literals should not be duplicated
Code Smell
Functions should not be empty
Code Smell
All branches in a conditional structure should not have exactly the same implementation
Bug
"=+" should not be used instead of "+="
Bug
Related "if/else if" statements should not have the same condition
Bug
Identical expressions should not be used on both sides of a binary operator
Bug
All code should be reachable
Bug
Variables should not be self-assigned
Bug
Functions should not have identical implementations
Code Smell
Two branches in a conditional structure should not have exactly the same implementation
Code Smell

Redundant pairs of parentheses should be removed

Analyze your code

Code Smell Major ? confusing

The use of parentheses, even those not required to enforce a desired order of operations, can clarify the intent behind a piece of code. But redundant pairs of parentheses could be misleading, and should be removed.

Noncompliant Code Example

```
func foo(a bool, y int) int {
    x := (y / 2 + 1)    //Compliant even if the parenthesis

    if a && ((x+y > 0)) { // Noncompliant
        //...
    }

    return ((x + 1))    // Noncompliant
}
```

Compliant Solution

```
func foo(a bool, y int) int {
    x := (y / 2 + 1)

    if a && (x+y > 0) {
        //...
    }

    return (x + 1)
}
```
