Regular expressions should be

"runFinalizersOnExit" should not be

```
Functions should not have
                                        Analyze your code
identical implementations
confusing duplicate suspicious
When two functions have the same implementation, either it was a mistake -
something else was intended - or the duplication was intentional, but may be
confusing to maintainers. In the latter case, the code should be refactored.
Noncompliant Code Example
 class MyClass {
   fun calculateCode(): String {
      doTheThing()
      doOtherThing()
      return "done"
    }
   fun getStatus(): String { // Noncompliant
      doTheThing()
      doOtherThing()
      return "done"
    }
 }
Compliant Solution
 class MyClass {
   fun calculateCode(): String {
      doTheThing()
      doOtherThing()
      return "done"
    }
    fun getStatus(): String = calculateCode()
Exceptions
Methods with fewer than 2 statements are ignored.
